

SES 1.0 Viewer

This viewer has been created by Knowlix; terms and conditions for use are provided when you extract the files.

This viewer will read an SES 1.0 - compliant MOF file, with the following caveats:

- Categories under Solution not currently read. (The need for this became much clearer in version 1.1 specification, as it states it is for company/administrative information)
- Expressions object under Product object using Product_Expression association not currently read in.
- Currently only one reference object allowed.
- Assumes that no object is referenced more than once in the MOF object hierarchy.
